IN THE CLAIMS:

Claim 1 (Currently Amended) A photographic print processing method, comprising the steps of:

~~representing~~ **displaying** a plurality of images arranged in a two-dimensional array on a display screen wherein images arranged at least in a one-dimensional direction in succession among said plurality of images are images processed states of which are gradually changed in at least one attribute of image ~~proceeding~~ **processing**; and

performing image verification based on the thus ~~represented~~ **displayed** plurality of images.

Claim 2 (Currently Amended) The method according to claim 1,

wherein said at least one attribute has a plurality of attributes of the image processing, and

wherein said plurality of images ~~represented~~ **displayed** in the two-dimensional array are arranged in each one-dimensional direction in respect to two attributes selected arbitrarily from the plurality of attributes.

Claim 3 (Currently Amended): A photographic print processing apparatus, comprising:

a device for reading an image recorded on **photographic** film; and

a ~~representation~~ **display** device for ~~representing~~ **displaying** the thus read image,

wherein image processed states of which are gradually changed in at least one attribute of

image processing and which are arranged at least in a one-dimensional direction are ~~represented~~

displayed in succession on a **display** screen of the ~~representation~~ **display** device.

Claim 4 (Currently Amended) The apparatus according to claim 3,

wherein said at least one attribute has a plurality of attributes of the image processing,

and wherein said plurality of images ~~represented~~ **displayed** in the two-dimensional array are

arranged in each one-dimensional direction in respect to two attributes selected arbitrarily from

the plurality of attributes.

Claim 5 (Currently Amended) A photographic print processing method, comprising the

steps of:

~~representing~~ **displaying** a plurality of images arranged in a two-dimensional array on a

display screen wherein said plurality of images are processed in one frame in different states to

each other and arranged at least in a one-dimensional direction in succession are images

processed states which are gradually changed in at least one attribute of image proceeding; and

performing image verification of said image in said one frame based on the thus

~~represented~~ **displayed** plurality of images.

Claim 6 (Currently Amended) A photographic print processing apparatus, comprising:

a device for reading an image recorded on **photographic** film; and

a ~~representation~~ **display** device for ~~representing~~ **displaying** the thus read image,

wherein a plurality of images which are processed said read image in one frame in

different states to each other are arranged in a two-dimensional array on a display screen of the

~~representation~~ **display** device, and

wherein images processed states of which are gradually changed in at least one attribute

of image processing and which are arranged at least in a one-dimensional direction are

~~represented~~ **displayed** in succession on the display screen of the ~~representation~~ **display**.
